

.....

Dear VisArts/Eng Tritons,

Pyramids are piles of rocks, the Hanging Gardens of Babylon were a bunch of flower pots made of mud bricks, and Mona Lisa is globs of oil mixed with stone dust on linen and sticks.

What makes *'stuff'* into marvels of invention are often simple ideas. Turning ideas into things, however, isn't always all that simple. You and your ideas might need help—at least getting started.

Come rub elbows with other arts and engineering students who can show you the ropes, help you use a laser cutter, a 3D printer, hand tools and machines to turn your thoughts into things.

We want you to come and experience how good it feels to see your doodles on napkins or in scrapbooks become tangible things.

We won't make things for you, but you will learn the skills you need to build your thoughts.

Our *'stuff'* is waiting for your ideas.

Yours,

EnVision
